# Features

1. Heating coil with low-voltage design, insulated heating, safe, and table.
2. The induction generator is designed to allow the homogenization of the alloy thanks to the stirring effect of the magnetic field which works while the metal is being melted in the crucible.
3. Water in the tank is continuously circulating and it is cooled by a powerful chiller to keep the process variables under control and obtaining consistency and quality in the produced grains.
4. Easy to get materials from granulating barrel and can supplement cooling water.
5. The finished products have no oxidization, producing equal particles, good color and good sphere.
