Features

- 1: CDOCAST gold smelting machine has the ability of electromagnetic stirring, which can make the metal melting more homogeneous and evenly.
- 2: Able to work continuously for 24 hours, greatly increasing productivity.
- 3: The design of the pouring system makes it easy for workers to operate, and can pour the molten liquid into the mold more precisely which can prevent the crucible from spilling the molten metal liquid caused by the error operation of the crucible.
- 4: gold smelting machine is Configured with a variety of safety alarm system, if the occurrence of overcurrent, overpressure, water shortage and other conditions, the machine will stop running automatically , which can effectively protect the machine!
- 5: Thermocouple or infrared thermometer temperature control can be installed to monitor the temperature of the entire melting process.
- 6: Built-in water pump design, just need to connect the water and electricity can be used directly.
